Profile

Frontend focused Full-stack product engineer who owns features end-to-end from API design and database schema to React UI and user docs. I build for real users: shipped SaaS platforms, AI agent workflows with agent-callable APIs and function calling, and real-time systems on Socket.io. I take projects from 0 to 1, talk to users, iterate fast, and write down what I learn. Looking to own products, not just close tickets.

Experience

Freelance Software Developer - Full-Stack & AI Engineer

April 2025 – Present

- Fully owned 5+ client projects end-to-end scoping, API design, frontend, deployment, and iteration including BagYo(Startup), built with React, TypeScript, and Tailwind CSS.
- Built authentication systems, dashboards, and third-party API integrations; improved development efficiency 30% through reusable component libraries.
- Enhanced frontend performance and responsiveness by 25% through optimised state management and lazy-loading patterns.
- Contributed to Aden Hive, an open-source AI agent platform: shipped frontend enhancements and fixed bugs in the agent workflow interface gaining hands-on experience with how agents consume and navigate UI-driven APIs.

Linchpin Organization - Frontend Developer

Dec 2023 – Apr 2025

- Led frontend development of the organisation website; improved user experience and mobile responsiveness by 35%.
- Created 20+ reusable UI components with React, reducing future development effort by 40% components still in active production use.
- Collaborated with cross-functional teams to deliver production-ready features within deadlines; documented component usage so other contributors could onboard without needing me.

Madadgaar Foundation - Web Development Intern

Jul 2023 – Sep 2023

- Developed responsive web pages that improved mobile compatibility by 30%; converted design mock-ups to functional interfaces with 95% design accuracy.
- Assisted in debugging and frontend optimisation, reducing reported frontend issues by 20%.

Projects

AutoLife AI - Smart Daily Automation System

2026

- Took AutoLife AI from 0 to production: scoped features, designed the architecture, shipped the UI, and iterated based on early user feedback.
- Built agent-callable task routing APIs with structured outputs and function calling, enabling LLM agents to autonomously schedule and manage tasks reduced manual effort by 40%.
- Implemented multi-agent workflow orchestration where each agent owns a discrete task domain; improved automation accuracy by 30% through intelligent routing logic.
- Wrote technical documentation covering API contract, agent integration guide, and architecture decisions — designed to be readable by both humans and machines.
- Recognised with a Google Cloud certificate for the project's use of GCP infrastructure and AI services.

Aether - 3D Digital Workspace (SaaS)

2025

- Took Aether from 0 to production-ready SaaS scoped the product, designed scalable APIs, built the React frontend, and shipped secure multi-user workspace management.
- Optimised state management and data fetching strategies, reducing application load times by 25%; gathered user feedback post-launch and shipped two iterative improvements within the first month.
- Built full authentication flow with JWT, session management, and role-based access control.

Nexus Real - Time Chat Application

2025

- Built a real-time messaging platform using Socket.io; achieved 35% latency improvement through optimised event handling and connection pooling.
- Integrated cloud file sharing (AWS S3) and secure authentication; wrote a short post-launch retro documenting what broke in production and how I fixed it.

Technical Skills

Frontend: Vue.js, React, Next.js, TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3, Zustand, Responsive Design

Backend: Node.js, Express.js, FastAPI, Python, Django (familiar)

Databases: PostgreSQL, MongoDB, MySQL

AI & LLMs: OpenAI API, Google GenAI, Function Calling, MCP servers, RAG, AI Agent Workflows, LLM Evals, Structured Outputs, Prompt Engineering

Tools & DevOps: Git, GitHub, Docker, AWS S3, Postman, Socket.io, GitHub Actions, CI/CD, Google Cloud Platform

Certifications

Google Cloud Certificate - Google Cloud / AutoLife AI project

2026

Full stack Mern Certificate – Acmegrade

2023

Education

Presidency University, Bengaluru - *Bachelor of Computer Applications*

Sep 2022 – Sep 2025
